

The Vision: A World That Works for Everyone

Imagine a city where the air is clean, water is abundant, and your digital world works for you, not against you. At Bingham Labs, we aren't just dreaming of this future—we are building the blueprints for it.

We are a research and development lab dedicated to solving the three biggest challenges of our century: water scarcity, energy independence, and the productivity gap. Through our revolutionary "Smart-Grid" technology and "Oasis Machines," we are transforming how communities survive and thrive.

The Problem We Are Solving

Water Scarcity: Traditional water sources are drying up. We've developed "Oasis Machines"—Atmospheric Water Generators that use breakthrough electrolysis to extract clean water from the air at a fraction of the current cost.

Digital Overload: Our "Agentic AI" program moves beyond simple chatbots. We are deploying specialized tablets that act as personal agents, handling everything from scheduling and research to managing home energy, allowing people to focus on what matters most.

Aging Infrastructure: We are proposing a 210-mile "Smart-Grid Corridor" across Colorado, linking 25 towns with high-speed fiber, AI data factories, and sustainable energy.

Why We Need Your Help Now

Innovation at this scale often faces "The Valley of Death"—the gap between a brilliant prototype and a full-scale rollout. While we have applied for significant federal and state grants, the path to groundbreaking change is often paved by the community first.

Our Immediate Goal: The Beta Prototype

We are raising funds to launch our 100-200 person Beta Test in the Colorado DDA corridor. Your donation will directly fund:

Manufacturing Prototype Oasis Machines: Bringing clean water technology to drought-stricken areas.

Deploying Agentic AI Tablets: Providing the software and hardware to our first cohort of volunteer users.

Data Modeling: Proving that this "Smart-Grid" model creates an economic multiplier for local towns, making it impossible for the government to ignore.

The Impact of Your Donation

\$50 helps fund the R&D for one AI Agent software license. Receive a button showing your support.

\$250 supports the fabrication of components for an Oasis Water Machine. Receive a T-shirt showing your support.

\$1,000+ makes you a "Founding Supporter," getting you exclusive updates on our lab's progress and early access to our research papers. Receive both the button and the T-shirt supporting our efforts.

Join the Movement

Bingham Labs is more than a tech company; it's an economic development project designed to stimulate growth from the ground up. By donating, you aren't just supporting a "startup"—you are investing in the infrastructure of the next civilization.

Will you help us build the first leg of the future?
